PART OF
A BETTER
FUTURE

INVITATION FROM THE **APPEA CHAIR**

It's a pivotal time for Australia's oil and gas industry. Following the unprecedented challenges brought on by the COVID-19 pandemic, there is renewed confidence in the industry highlighted by expanding production, new investment and strong demand.

So, it's a great year to be holding Australia's best conference in Queensland, the birthplace of Australia's natural gas industry, and where a vibrant domestic industry provides competitively priced natural gas to attract new job and wealth creating opportunities—such as the emerging hydrogen industry—to the state.

In Australia, gas is vital to our national economy and modern standard of living. Two-thirds of our nation's energy is supplied by the oil and gas industry and in the last two years Australia has catapulted to become the world's top exporter of LNG.

Those LNG exports are instrumental to providing secure, affordable and cleaner energy to nations across Asia, potentially lowering emissions in importing countries by around 170 Mt of CO₂ each year by providing an alternative to higher emissions fuels.

Last year our Chair said, 'the debate over meeting Australia's and the world's energy needs, while reducing emissions, has never been more important.' This statement is even more profound today.

Despite the positive growth in renewable energy, the world remains heavily reliant on oil and natural gas and will continue to demand these fuels for decades to come. Therefore, solutions to address climate change and emissions reduction must include technologies that make these fuels cleaner and eventually 'zero emissions'. In particular, carbon capture and storage and hydrogen.

The APPEA 2022 Conference and Exhibition in Brisbane will provide an unparalleled

opportunity to meet, engage and progress solutions on these and other vital issues.

Embracing the theme Positive Energy for a Changing World, the three-day conference program will bring together oil and gas professionals, industry and political leaders, analysts, policymakers and media from around Australia and across the globe. The program will feature perspectives from leading commentators, the latest case studies and technical knowledge and APPEA's plenary program will headline the big opportunities and most pressing challenges facing our industry now and into the future.

In 2022 we will also deliver an exciting Youth Program in conjunction with Queensland schools and students to give them greater insights into our industry and highlight rewarding careers in the oil and gas sector.

APPEA welcomes our Principal Partners for our 2022 event—Woodside and ExxonMobil—and thanks them for their tremendous support. The commitment from all our exhibitors and sponsors is both appreciated and essential to the success of our conference.

I hope you will join us at APPEA 2022, whether in-person in Brisbane or via our virtual platform and contribute to this important conversation about the role of Australia's oil and gas industry in delivering Positive Energy for a Changing World.

In this deep dive session into talent attraction, retention and development, speakers from education, the leading edge of student feedback, expert analysts and companies grappling with the problem and what their solutions are, will deliver a facilitated, open and frank discussion for delegates to get a true feel for our pathway forward in this crucial subject for our future industry.

Investing through Unprecedented Change

Facilitator: Helen Dalley, Journalist and Broadcaster

The Australian oil and gas industry has invested more than \$450 million since 2010 in developing Australia's substantial oil and gas reserves. But the risk reward environment is changing rapidly. The path to net zero, the rise of green energy and climate activism along with the role oil and gas will play in the energy transition, has changed the risk equation for investors and financiers. Activist shareholder pressure both on oil and gas companies directly as well as on those who finance the sector has introduced uncertainty, demands for greater transparency and concerns about stranded assets as the world undertakes the energy transition. Opposite this, demand for natural gas in particular is forecast to increase in Asia by more than 50% between now and 2050. Natural gas plays a key role in supporting the uptake of renewables, is a critical feedstock without alternatives and is playing a key role in many places replacing coal in electricity generation. How can the investment case be made and how can risk be managed to support the further growth of Australia's oil and gas sector both domestically and as an energy exporter? Global competition for new investment capital is tough so how does Australia stay at the front of the investment queue? The industry's ability to attract ongoing investment in exploration and maintain secure and mutually beneficial relationships with trading partners is vital to future industry development and growth. What do we need to change to ensure we can continue to attract investment and is this the start of a private equity shift in oil and gas? What is the role that governments can and must play in attracting investment, particularly for resource dependent states? This session will bring together senior government ministers, bankers and analysts to discuss how we can continue to invest for the future of Australia's oil and gas sector and for the Australian economy more widely.
